The Complete Web Developer Bootcamp, *Udemy*

www.freecodecamp.org

PROJECTS

Portfolio website - Github | Demo
A single-page-application built in React.
- Uses React Router
- Style is implemented using styled-components.

Where in the World? - Github | Demo
A single-page-application integrating REST Countries API. Shows you the countries from the API on the homepage. You can search for a specific country by name or filter by region.
- Built in React, using React Router
- Utilizing React Context to allow 'dark mode'

Credit Card Form - Github | Demo
A credit card input form built in React
- Handles form validation using state.
- Displays form input on simulated credit card using state

Colorful - Github
Colorful is a CRUD single-page-application built with React where you can create and update color palettes.
- Designed database schema and stored data using MongoDB and mongoose.
- Manages related data through complex forms and RESTful routes.

Frontend Mentor - Github | Demo
Responsive landing page built from static designs provided by Frontend Mentor.
